SUMMARY

Full-stack software engineer and team lead with 5 years of production experience in C#, .NET, ASP.NET Core, React, Azure and SQL Server. Currently lead a 5-developer team at Deloitte on the Florida Department of Children and Families (DCF) benefits modernization. Strongest in high-volume data processing (103M+ rows in under 8 minutes), secure, high-throughput REST APIs, and replacing legacy systems.

EXPERIENCE

Full-Stack Engineer & Team Lead Deloitte Remote *Apr 2024 – Present*

Official title: Solutions Specialist, Consultant. Florida DCF benefits system modernization, a 200-person program

- Lead a 5-developer team that delivered a React UI module for the first phase of the DCF modernization, live in production since June 2025. The module modernized the client's previous app; some of its pages will be replaced by Wizards, but most were newly built and will remain. Own code reviews and coding standards for the team.
- Processed 103M+ rows across 200 columns in under 8 minutes with a C# batch pipeline that aggregates the data and delivers it via SFTP. The client uses the output as its source of truth during the system migration.
- Built about 50 of the program's 200+ C# API endpoints against a 1.5-second response-time SLA, with p95 of 1.2 seconds on 90% of them. Review the PERF runs of every endpoint and check each against coding standards. Created reusable async patterns that the team adopted, which removed duplicated code across the codebase.
- Unblocked the production release when the MuleSoft integration couldn't handle the required throughput: worked with the team and client to route those calls directly to the Oracle database.
- Built front-end and back-end logic for "Wizards," a case tool that compares data from 4 government sources so caseworkers can process benefits cases accurately. Set to go live in December 2026 for every DCF caseworker in Florida, and designed to cut case-processing time by more than 50%.

Software Engineer Brown & Brown Insurance Hybrid, Daytona Beach, FL *Oct 2021 – Apr 2024*

- Built centralized C# REST APIs for user authorization, PDF conversion and OCR, secured and monitored through Azure API Management. These APIs were reused by 5 teams across 15 applications by the time I left.
- Built a secure Blazor file-sharing platform with Entra External ID, used by internal staff, brokers and carriers to exchange large documents. It replaced an acquired company's 10+-year-old single-brand app with one platform the whole company can use.
- Built a monthly legal compliance survey system (Azure Functions, C# .NET 6, SQL Server) that sends 6,000+ emails with timed reminders. It raised compliance from about 20% to 98%, per the legal team.
- Built Power BI dashboards on Qualys vulnerability data so security leadership could track trends without working from raw exports.
- Mentored 5 summer intern teams: ran code reviews and showed them the internal resources that would speed up their apps.

IT Resource Specialist Stetson University DeLand, FL *May 2021 – Oct 2021*

- Provided campus hardware and software support and coached intern IT assistants.

EDUCATION

B.S. Computer Science Stetson University, DeLand, FL *2021*

A.A. Daytona State College, Daytona Beach, FL *2018*

SKILLS

Languages: C#, JavaScript, TypeScript, SQL, Python, Java
Backend: .NET 6 – .NET 10, ASP.NET Core Web API, Entity Framework Core, RESTful APIs, async programming, Swagger/OpenAPI
Frontend: React, Blazor
Cloud & DevOps: Azure Functions, Azure App Service, Azure API Management, Azure Blob Storage, Azure DevOps, Entra ID / External ID, Docker, Git, AWS S3, CI/CD pipelines (personal projects)
Data: SQL Server, Oracle, Power BI, Power Platform
Testing: Jest, xUnit
Tools: Visual Studio, VS Code, SurveyJS, Burp Suite
Methodologies: Agile, Scrum

VOLUNTEER

- Assistant Youth Director and Trustee, First Church DeLand
